

## MidPoint Community Meetup 2025

# Redesigning Approvals: A Clearer and Smarter UX for Everyone

# Challenges

## Approvals

- Very limited information about requests from basic user side
- Users are getting no feedback about request status
- Complex data form of widget with long information delivery
- No interaction availability between requester and approver
- Unnecessary complexity of view above approval items
- Complex and hard to scan name builder of approval item
- Prioritization of approvals are lacking

# Suggested improvements

## Approvals

- Simplify complex wording and restructure approval item names
- Redesign the UI for clarity and improved information hierarchy
- Make midPoint help users by providing information through notifications
- Enable interaction between requesters and approvers
- Differentiate the data distribution based on type of user
- Speed up the navigation by taking “child” items out of their parents
- Make midPoint smarter with recommendations and simulation before decision
- Provide various POVs above approval process
- Measure what matters for managers

# Demonstration

Note: This is a prototype, inconsistencies/errors may appear

# Evolveum

## Thank you for your attention
